ON THE ADVANTAGES OF FORTIFORM®
980 GI - A 3RD GENERATION AHSS GRADE
WITH SUPERIOR WELDABILITY

Hassan Ghassemi-Armaki, Qaiser Khan, and Shri Aditya Varanasi
ArcelorMittal Global R&D, East Chicago, IN, USA
Engineered product - Excellent mechanical properties with improved LME resistance

**Engineering Stress-Strain Curve**

**Microstructure**

- Tempered Martensite/Bainite
- Retained Austenite
- Ferrite
- Fresh Martensite
WELDABILITY
SPOT WELDING

Stackup: 1.6mm GI980HF / 1.5 mm GI EDDS / 1.5mm GI EDDS
Welding Condition: SEP1220-2

Max. Welding Current (Imax); Just Below Expulsion

10% Above Imax (Above Expulsion)

No surface cracking in high thickness heterogenous stackups with mild steel; even at Expulsion
WELDABILITY
GAS METAL ARC WELDING (GMAW)

Cross-section Images at Maximum Penetration

Continuous welded seam

Stitch welded seam

No Surface Cracks for all the different welded geometries studied

Microhardness plots

Stitch Seam Weld

Cross-Tension
WELDABILITY
MIG BRAZING AND LASER WELDING

Stitch brazed cross tension, VD\textsubscript{MIN}

Continuous brazed seam, VDMAX

Stitch brazed seam, VDMAX

MIG Brazing

Laser Welding

Micro-Hardness

Load-Displ.; continuous, stich seam and CT

Load-Displ.; continuous, stich seam and CT
To assess the Resistance Spot Weld (RSW) performance in a dynamic event

- A double hat section was used to ensure spot welds are subjected to peel loading mode
- 3 gauges tested - 1.4mm, 1.6mm and 1.2mm
- Parts baked at 180°C for 27 mins
- Weld pitch - 25mm & 20mm
- Test Speed of 9.0 mph & a target energy of 15kJ

FORTIFORM® 980 GI
1.4MM SAMPLES

Un-Baked Sample
25mm Weld Pitch, 6.2mm Nugget Size

Baked Sample
25mm Weld Pitch, 6.2mm Nugget Size

Sample 1

Sample 2

Test provided repeatable crush pattern. Effect of Baking is not significant at 1.4mm thickness
Effect of weld pitch is higher than the weld nugget size
Effect of Weld Pitch vs Nugget Size

Samples with 20mm pitch, even at a lower nugget size, maintain consistent average force.
FORTIFORM® 980 GI
1.6MM SAMPLES

Un-Baked Sample
25mm Weld Pitch, 6.7mm Nugget Size

Baked Sample
25mm Weld Pitch, 6.7mm Nugget Size

Sample 1

Sample 2

Repeatable crush pattern is observed. Effect of baking is not significant at 1.6mm thickness
FORTIFORM® 980 GI
WELD TOUGHNESS IMPROVEMENT – BAKING EFFECT

Cross Tension Strength (kN)

Weld Toughness
- Toughness (Area under the curve upto Max Load)
- Full Toughness (Area under the full curve)

1.2mm Coupon
FORTIFORM® 980 GI
1.2MM SAMPLES

Un-Baked Sample
25mm Weld Pitch, 5.3mm Nugget Size

Baked Sample
25mm Weld Pitch, 5.3mm Nugget Size

Sample 1

Sample 2

Repeatable crush pattern is observed. Effect of baking is significant at 1.2mm thickness.
• Fortiform® 980 GI 3rd GEN product,
  • Combines excellent strength & formability and offers light weighting opportunities
  • Product can absorb energy during crash events and deform in a controlled manner similar to currently used steel grades
  • Exhibits superior weldability
  • Effect of baking on weld performance during crash is more pronounced at lower thickness
    o 3rd GEN samples should always be baked when testing samples
• Four different welding types of Resistance Spot-Welding (RSW), Laser Welding, MIG Brazing and Gas Metal Arc Welding (GMAW) have been examined with no signs of surface cracks in critical zones
• Important to note that Fortiform® 980 GI 3rd GEN is compatible with the current welding technology used in the industry
