# **A LOOK THROUGH THE 3 GENERATIONS OF EV ARCHITECTURE**

# GENERATION 1 – SKATEBOARD

- Battery Tray underneath body frame
- Previous generation, still utilized

Rivian RT-1

Steel Cover

Extruded  
Aluminum  
Sides

Steel Bottom

# GENERATION 2 – STRUCTURALLY INTEGRATED

- Battery Tray integrated structurally with body frame
- Current Generation

Audi e-tron GT

Integration of the high-voltage battery in the body structure

02/21

Battery Tray

# GENERATION 3 – VEHICLE INTEGRATED

- Improvements in battery range/charging efficiency
  - Batteries infiltrating more spaces in a vehicle (i.e., Doors)
- Concern for occupant safety
  - Batteries becoming more structural
- Consideration for recycling of battery trays
- Material trends:
  - More optimization of cost
    - Increased use of high-strength steels
  - Lightweighting of components to continue
    - Increased use of alternative materials (aluminum, magnesium)
- Increased use in mechanically attached fasteners

# FASTENING CHALLENGES

- Material Applications
  - New materials being introduced
  - Thinner Materials expected
- Ingress Protection
  - Requirements for ingress protection not fully being realized
  - Testing on a component level versus assembly level
- Application access
  - Long extrusions being used
  - Closed Access
- Load Bearing Capabilities
- Electrical conductivity

# **MECHANICALLY ATTACHED FASTENING**

# PENN ENGINEERING AND PROFIL

**PennEngineering®**

**PROFIL**  
a PennEngineering® Company

*Global Leaders in Mechanically Attached Fasteners*

# THE PENN ENGINEERING ADVANTAGE

**Technical Advisory  
and OEM and Tier**  
Global field  
engineering and  
direct sales engineers

**Manufacturing**  
Global manufacturing  
capabilities in local  
markets

**Application  
Engineering Support**  
Global application  
engineering experts  
and full test lab  
capabilities

**After Sales Technical  
Support**  
Full, ongoing  
technical support and  
on-site training as  
required

# **WATER INGRESS PROTECTION**

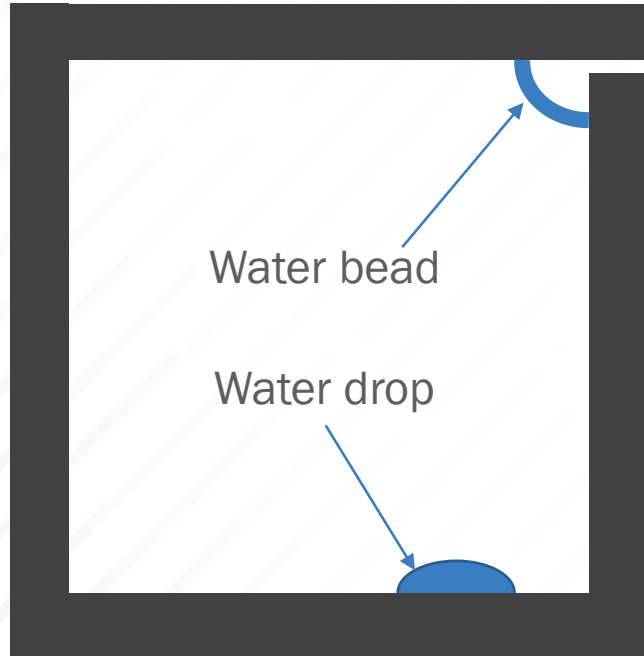

# INGRESS PROTECTION

- Based on ISO 20653
  - IP67 – Temporarily submerged in water (30 minutes)
  - IP69K – Protection against high-pressure/steam jet cleaning
- Current process:
  - Submerge assembly in a large water bath
  - Wait 30 minutes and look for bubbles
  - Disassemble tested assembly
  - Look for water
- This process is quantifiable through counting bubbles expelled by the battery pack

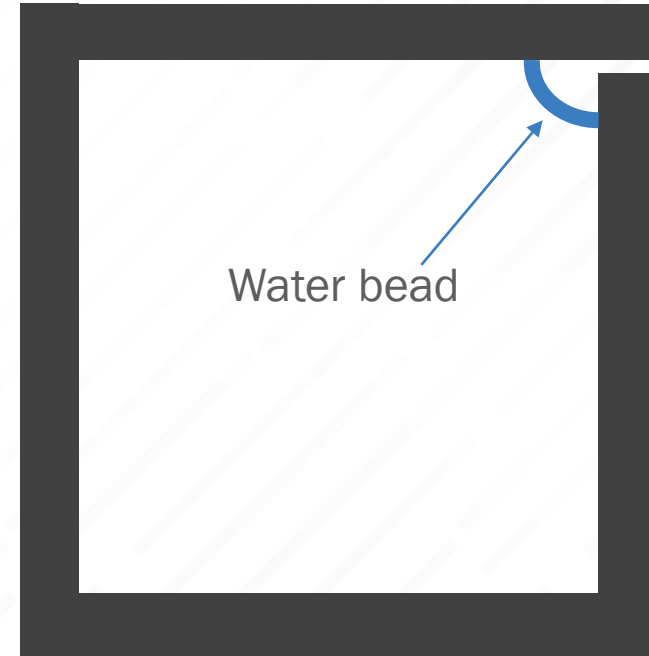

# CLARIFICATION OF FAILURE

Failure

Pass

# INGRESS PROTECTION

- Internally developed standard for leak testing MAF
- Developed with industry partner Inficon
- Quantifies leak resistance through vacuum method referencing Helium gas
- Available for industry use, please contact us

PROFIL Verbindungstechnik GmbH & Co.KG

Corporate Instruction: CI Leak 07/2021  
Tightness and leak measurement of  
mechanically attached fasteners

|                              |                           |                             |                                      |

Subject to technical changes

# INGRESS PROTECTION

- Vacuum method referencing helium
  - Connect helium detector to outgoing port
  - Engage vacuum
  - Provide Helium to leak area
  - Read test value

Correlation between IP67 and IP69k and panel substrate:

|                 | IP67                               | IP69k                              |
|-----------------|------------------------------------|------------------------------------|
| <b>Steel</b>    | $\approx 5 \cdot 10^{-3}$ mbar·l/s | $\approx 1 \cdot 10^{-3}$ mbar·l/s |
| <b>Aluminum</b> | $\approx 5 \cdot 10^{-5}$ mbar·l/s | $\approx 1 \cdot 10^{-5}$ mbar·l/s |

Meaning of leakage rates,  $\Delta p=1$  bar:

| Request               | mbar·l/s         | cm <sup>3</sup> /s | cm <sup>3</sup> /min | l/min              | l/h                  | ml/min             | sccm               | Description                           |
|-----------------------|------------------|--------------------|----------------------|--------------------|----------------------|--------------------|--------------------|---------------------------------------|
|                       | 10 <sup>-0</sup> | 10 <sup>-0</sup>   | 6·10 <sup>1</sup>    | 6·10 <sup>-2</sup> | 3.6·10 <sup>0</sup>  | 6·10 <sup>1</sup>  | 6·10 <sup>1</sup>  | Water tap drips                       |
|                       | 10 <sup>-1</sup> | 10 <sup>-1</sup>   | 6·10 <sup>0</sup>    | 6·10 <sup>-3</sup> | 3.6·10 <sup>-1</sup> | 6·10 <sup>0</sup>  | 6·10 <sup>0</sup>  | 1 cm <sup>3</sup> gas loss in 10 s    |
| <b>Watertight</b>     | 10 <sup>-2</sup> | 10 <sup>-2</sup>   | 6·10 <sup>-1</sup>   | 6·10 <sup>-4</sup> | 3.6·10 <sup>-2</sup> | 6·10 <sup>-1</sup> | 6·10 <sup>-1</sup> | Water tap does not drip               |
| <b>Oil-tight</b>      | 10 <sup>-3</sup> | 10 <sup>-3</sup>   | 6·10 <sup>-2</sup>   | 6·10 <sup>-5</sup> | 3.6·10 <sup>-3</sup> | 6·10 <sup>-2</sup> | 6·10 <sup>-2</sup> | <1 bubbles per second                 |
| <b>Bacteria Proof</b> | 10 <sup>-4</sup> | 10 <sup>-4</sup>   | 6·10 <sup>-3</sup>   | 6·10 <sup>-6</sup> | 3.6·10 <sup>-4</sup> | 6·10 <sup>-3</sup> | 6·10 <sup>-3</sup> | 1 cm <sup>3</sup> gas loss in 160 min |
| <b>Gasoline Proof</b> | 10 <sup>-5</sup> | 10 <sup>-5</sup>   | 6·10 <sup>-4</sup>   | 6·10 <sup>-7</sup> | 3.6·10 <sup>-5</sup> | 6·10 <sup>-4</sup> | 6·10 <sup>-4</sup> | 1 cm <sup>3</sup> gas loss in 26 h    |
| <b>Gas Tight</b>      | 10 <sup>-6</sup> | 10 <sup>-6</sup>   | 6·10 <sup>-5</sup>   | 6·10 <sup>-8</sup> | 3.6·10 <sup>-6</sup> | 6·10 <sup>-5</sup> | 6·10 <sup>-5</sup> | 1 cm <sup>3</sup> gas loss in 12 days |

Square RSE

# **FASTENERS IN CLOSED SECTIONS**

# FASTENERS IN CLOSED SECTIONS

# KEY TAKEAWAYS

# KEY TAKEAWAYS

- EV architecture is evolving needing solutions from fasteners
- Mechanically attached fasteners are highly tailored solutions to many fastening problems
- Water ingress protection is possible through mechanically attached fasteners
- Attachment to a wide variety of materials is possible
- Applications in less accessible areas is possible, working with customers is key
- Development of Special Fasteners for Electrical Conductivity aids in application design
